

For sectional doors* up to 20 m².

24 Vdc electromechanical gear motor with absolute encoder.

*For balanced sectional doors equipped with anti-crash (safety device useful in case of spring breaking).

Versatile

Ideal in residential contexts also for large doors, multi-user contexts with intensive use and industrial with small doors for example 3 x 3 m loading points.

All in one

built-in control unit. No guide or ratchet.

Easy to install: Soon can be fitted directly onto the shaft of a sectional door; compact, particularly in width, in order to make assembly easy in any position.

User-friendly thanks to the BlueBUS system

that enables users to connect the photocell couples and control unit using just two wires.

Practical: the control unit and PS124 buffer battery (optional) can be connected by means of a simple connector and can be housed directly inside the motor.

Energy saving: when the system is not being used it will switch over to standby.

Reliable and precise: memorization of limit switch positions on opening and closing; gradual starting and slowdown during closing; the abosolute encoder technology guarantees precision without the need of a limit switch, reliability and long term safeguard of the set values.

Safe: obstacle detection system; motor absorption is monitored during movement, self-diagnosis by means of a flashing light and courtesy light.

Last generation of 8.2 KOhm optical and sensitive edges can also be connected.

Simple maintenance

Removable terminals and receivers.

Easy to certify

Passes impact tests without further accessories.
